May 2020 (pandemic electronic issue)

The Virus, Life Issues and a “New Normal”

Theology of the Body Virtual

Conference On the weekend of May 8-10 there will be over 60 of the best known Catholic speakers and evangelists speaking on the topic. This conference will be available worldwide between Friday, May 8, 2020, at 12PM EDT to Sunday, May 10, 2020, at Midnight. This online event is offered at NO COST! Register at <https://www.tobvirtualconference.com> There is also available a discounted Premium Pass Option for those who want access to the conference after May 10th.

Neural Evidence That Two Really Do Become One

Long-term married couples have been reported to share personality and behavioral similarities, but whether long-term marriage would shape the brain is hitherto unknown. In this study, 35 pairs of long-term married couples living together at least 30 years, were recruited. The results provide objective evidence that **long-term marriage shapes brain network** organization, and the combination of initial personality traits and long-term common experience of the couples may be potential factors that account for similar brain network organizations between couples. [multiple authors, Neural evidence for long-term marriage shaping the functional brain network organization between couples, *NeuroImage*, Oct. 2019]

Vaccines Using Aborted Babies' Cells?

Several companies including Pfizer, J&J, Oxford Univ., Moderna, & Merck have been working very quickly to develop Covid-19 vaccines. Some are beginning human clinical trials. [*Wall St. Jnl.*, 4/29/20]

Prominent bioethics groups are raising concerns because British scientists used cell lines derived from aborted babies in their experiments, something many pro-life and Catholic leaders have been urging scientists not to do. Though vaccines can save lives, pro-life advocates believe they should not be developed using materials derived from human rights abuses, including abortions. They note that **ethical alternatives are available**, and they can be just as successful.

Joseph Meaney, president of the National Catholic Bioethics Center (Philadelphia), stated that scientists tend to use cells derived from aborted babies out of “convenience,” even though they have ethical alternatives. “Many companies don’t use them & develop good vaccines” he said.

Dear College Students, RE Covid-19

I was a junior in college on 9/11, and even as shattering as that day was, most of us went back to class several days later in a way that removed us from the enduring loss. What makes this pandemic different is that no one is immune. We are likely to see illness and even death on a scale few if any of us have seen before. People we know are going to lose their jobs, if they have not lost them already. All this distancing will lead to increased feelings of loneliness, and many of us already felt lonely.

We have already begun to experience the losses that will not be recouped: “normal” is undergoing change. And so you come face-to-face with the irrefutable lesson that many of us do not learn until much later, if at all: life is about loss. That sounds fatalistic and pessimistic, but it is honest and potentially freeing.

It is freeing if we learn to accept that our lives are on loan and we are meant to give our lives over to others. The illusion of youth hides that; the honesty of adulthood unveils it. The irony of adulthood is that precisely when we reach that point where it seems our independence will have been maximized, we are reminded of our dependence both from within our own bodies and from the world around us. That is “the gift” of this pandemic: the truth is being laid bare—we are all vulnerable and dependent, and far more is contingent than certain.

So, here is my advice: accept the losses as losses, then find a way to give.

That sounds completely counterintuitive, because so many of our instincts direct us to try to find a way to recoup our losses, which lead us down the road to sorrow and futility. We were vulnerable before this and we will be vulnerable “after.” The call in this season is to throw off the

illusion of invulnerability and live together in truth. That is what college was supposed to lead you to anyway: Truth. [Leonard J. DeLorenzo, Ph.D., Notre Dame professor, excerpts from “Dear Students: There Is No Afterwards,” in *Catholic Education*, 3/25/20]

On March 2nd, Virginia became the 20th state to ban “conversion therapy” for minors. On March 4th, it made its Dept. of Educ. create pro-“transgender” public school policies. It also passed “gender transition” healthcare coverage and continues to rapidly advance bills for “non-binary” driver’s licenses, easier changes for birth certificates, repealing protections for faith-based adoption/foster care, all with no exceptions for religious freedom. [U.S. Conf. Catholic Bishops]

Vaccines.... (continued from page 1)

Catholic leaders, including Meaney, are urging people to “insist on ethical scientific research that has no links to abortion or the killing of embryos.” American Catholic bishops are raising similar concerns. In a recent letter, Bishop Joseph Strickland of Tyler, Texas urged people to stand strong against the “evil practice” of using aborted baby body parts to develop vaccines. “Just because the crime of abortion is considered legal in our nation **does not mean it is morally permissible** to use the dead bodies of these children to cure a global pandemic,” he wrote. “Emphatically, this practice is evil.”

U.S. Catholic bishops sent a letter urging the Food and Drug Administration (FDA) to ensure vaccines are being produced ethically. Pro-life leaders also have highlighted how ethical alternatives to tissue from aborted babies are available, including pluripotent stem cells and tissue from placentas, umbilical cords and amniotic fluid. In 2018, the U.S. administration created a \$20 million grant to invest in these ethical research alternatives. Recently, the Charlotte Lozier Institute noted that at least 60 potential treatments for the virus are being investigated right now using materials that do not come from aborted babies. States May Ban Abortions During

Pandemic The U.S. Court of Appeals for the Fifth Circuit, in a 2-to-1 ruling allowed Texas to suspend most abortions in the state during the coronavirus public-health crisis. In times of great emergency, states can reasonably restrict constitutional rights to **protect public safety**, the court’s majority said. “That settled rule allows the state to restrict, for example, one’s right to peaceably assemble, to publicly worship, to travel, and even to leave one’s home. The right to abortion is no exception,” Judge Stuart Kyle Duncan wrote for the court.

The fast-moving litigation is shaping up as the leading test case of whether states can use a national health emergency to place sweeping restrictions on abortion, despite constitutional protections for abortion rights previously established by the Supreme Court. Abortion providers who sued could now ask the appeals court to reconsider the issue with more judges participating, or they could seek emergency intervention from the Supreme Court. [Brent Kendall and Elizabeth Findell, *Wall St. Jnl.*, 4/7/20]

MLK’s Niece Banned from Speaking

Represented by Alliance Defending Freedom (ADF), pro-life students filed a lawsuit Wednesday against Georgia Tech, accusing its student government of **discriminating** against Martin Luther King Jr.’s niece Alveda King. The Student Government Association said that King’s pro-life views could be offensive. King is a celebrated pro-life and civil rights leader. In September, she spoke at Georgia Tech about her civil rights work and encouraged students to continue the cause.

Two student leaders of the pro-life club paid for the event themselves because the student government association refused to. Yet **all students pay into a student activities fund to help pay for such events**. ADF’s Caleb Dalton said: “Georgia Tech’s policy allowed discrimination against Ms. King because she was accused of leading an ‘inherently religious’ life. Under such a standard, Martin Luther King himself would not be welcome on campus. Public universities are supposed to be the marketplace of ideas, but that marketplace can’t function if a university grants funding only to student groups whose views the university favors.”

Students for Life of America President Kristan Hawkins said student pro-life clubs face opposition all across the country: “The Constitution is clear that public universities can’t engage in the type of discrimination that has taken place at Georgia Tech.” [Georgia Tech Faces Lawsuit After Discriminating Against A. King Because She’s Pro-Life, *LifeNews.com*, 4/2/20]

City Denies Care in Pandemic, Yet

Allows Surgical Abortions While NYC was still in the throes of the nation’s worst COVID-19 outbreak, ambulances responded to a medical emergency at the Margaret Sanger Planned Parenthood on April 24th. This was the 13th medical emergency at the high-volume abortion facility in the past 15 months. At the time of the emergency, the city was enduring a lockdown that included a ban on elective surgeries ... except for abortion.

“While legitimate NY businesses are closed and hospitals are denying care to people needing procedures such as organ transplants and cancer surgeries, abortion businesses are operating on all cylinders and Planned Parenthood sends women with botched abortions to occupy precious hospital beds,” said Troy Newman, Operation Rescue Pres. “New Yorkers are suffering without jobs or medical care, while abortion businesses rake in record profits. Planned Parenthood is given preferential treatment by the governor who made killing babies top priority in his state.” [Cheryl Sullenger, *LifeNews.com*, 4/27/20]

This free monthly newsletter is used by dozens of churches as a single-sheet bulletin insert, and is now posted on four diocesan websites. To receive your free copy, email editor Frank Tinari, tinarifr@shu.edu
